

# New partners at Bollinger+Grohmann

Frankfurt, 30 January 2026

Since its founding in 1983 by Klaus Bollinger and Manfred Grohmann, our company has undergone continuous development — driven by entrepreneurship, innovation, and strong team spirit. What began with two committed engineers evolved over decades into an internationally recognised company with numerous global offices. With the introduction of a new holding company in 2017, owned by active partners, we created a future-oriented framework that combines growth with accountability. Our philosophy remains unchanged: We see ourselves as one company, supported by strong local teams and united by shared values, goals, and strategic direction. As an independent firm, we assist public and private clients globally, handling projects of all sizes, uses, and complexities.

As 2026 approaches, this year marks not only the ending of an important chapter but also the deliberate start of a new one. Our founding partners, Klaus Bollinger and Manfred Grohmann, will continue to contribute through their roles on the holding's board and supervisory board — and naturally, as engineers — while gradually entrusting leadership to a new generation of partners. Our newly appointed partners represent both continuity and progress by merging their extensive experience with innovative ideas, integrating global insights with local engagement. Their strong focus on sustainability, digital transformation, entrepreneurship, and collaborative leadership positions them to play a crucial role in shaping our strategic future.

Partners (f.l.t.r.): Christoph Gengnagel, Klaus Bollinger, Alexander Freund, Arne Hofmann, Alexander Hofbeck, Simon Ruppert, Ulrich Storck, Klaas De Rycke, Agnes Weilandt, Heiko Trumpf, Angela Feldmann, Mark Fahlbusch, Philipp Eisenbach, Daniel Pfanner, Manfred Grohmann, Moritz Heimrath

We congratulate all new partners: Philipp Eisenbach, Angela Feldmann, Alexander Freund, Moritz Heimrath, and Alexander Hofbeck.

## Philipp Eisenbach

Philipp embodies the genuine attitude of Klaus and Manfred's original values in his interactions with clients, architects, and architecture. His ability to listen, understand, and implement ideas while striving for new innovative solutions makes him a valuable sparring partner throughout the project process.

## Angela Feldmann

From the beginning, Angela has consistently aimed to develop innovative solutions in her engineering work that address the challenges of the current climate crisis. She approaches her work intuitively and represents a new generation of engineers committed to taking responsibility for our environment and society. Angela exemplifies this commitment through her actions, both externally and internally.

## Alexander Freund

Alexander is a versatile engineer with a passion for tackling new challenges. He became involved in façade engineering many years ago and has since become a role model for entrepreneurship at B+G. Over the course of ten years, he transformed a diverse team of individual specialists into one of Germany's leading façade engineering practices.

## Moritz Heimrath

Moritz is one of our pioneers in parametric design. He translates architectural and computational expertise into strategies that define how we will work in the future. His work shapes international projects, where he orchestrates multidisciplinary teams. At the same time, he remains closely engaged and committed to his colleagues.

## Alexander Hofbeck

Alexander advocates for B+G's digital transformation and addresses the challenges we encounter in the broader digital transformation of our society, such as the use of artificial intelligence in our daily work. He has played a crucial role in shifting our company from traditional engineering to integrated design and information-based planning.
